## How do Sunflowers Follow the Sun

**Mobina Toosian**

*Physics Department*

*Sharif University of Technology*

### **Abstract**

Sunflowers track the Sun. There are circadian regulations of sunflower heliotropism, floral orientation and pollinator visits which can be components of productivity related to the translation of light into directional growth in Sun tracking plants including Sunflowers. These are all related to Solar tracking in Sunflowers. Some biological reasons and the consequences of them will be talked.
